Respecting the biological distance
horizontal offset of the biological
distance to help keep the microgap
away from the bone

Optimal position of smooth
and rough surface
maximize osseointegration and
crestal bone preservation with the
SLActive™ surface to the top

Bone Control Design™
Designed to optimize crestal bone preservation
by adherence to biological principles

Consistent Emergence Profiles™
Experience simplified soft tissue management
from start to finish

CrossFit™ Connection
Feel the fit of the self-guiding connection

SUPERB CRESTAL BONE PRESERVATION
THROUGH BONE CONTROL DESIGN™

Straumann developed Bone Control Design™ based on five fundamental biological principles to maximize crestal bone preservation and soft tissue stability.

Microgap control
conical connection designed to provide bacterial seal and minimize sensitivity to lateral forces

Implant surface osseointegration
increased treatment predictability and confidence with SLActive™ surface*

Biomechanical implant design
excellent fatigue strength and optimized force transmission

* as compared to SLA®
EXCELLENT ESTHETIC OUTCOMES THROUGH CONSISTENT EMERGENCE PROFILES™

The consistent emergence profiles of Straumann’s prosthetic components are designed to facilitate highly esthetic restorations that mimic natural teeth. These components, designed to match the abutment profiles, allow you to easily attain esthetic results through soft tissue management, allowing for:

- Minimal tissue trauma from start to finish
- Simplified soft-tissue management
- Enhanced patient comfort through minimized soft tissue impingement

EXCELLENT ESTHETIC OUTCOMES THROUGH CONSISTENT EMERGENCE PROFILES

Feel the fit of the self-guiding connection

The prosthetic connection is intuitive, self-guiding and easy to grasp. The CrossFit™ connection:

- Gives prosthetic flexibility and stability through its deep conical connection
- Provides a clear-cut insertion through the guidance of 4 grooves
- Designed to prevent rotation

Simplified Handling through CrossFit™ Connection

Surgical Kit, Prosthetic Kit, Procedure, and Instruments for All Straumann® Dental Implants

“The implant procedure is technically no different than what I have been doing except for the new profile drill prep.”

– Dr. William F. Runyan, Fort Worth, TX
OUTSTANDING SUCCESS RATES
SLActive™ – THE SURFACE WITH SUCCESS BUILT IN.™

Straumann’s SLActive™ surface sets a new standard in implant dentistry. As the first chemically active implant surface, SLActive™ offers you:

- Faster osseointegration to enhance confidence*
- Increased treatment predictability*
- Reduced healing times, from 6–8 weeks to 3–4 weeks*

Secondary Stability Sooner*

The speed of osseointegration dictates the severity and duration of the stability dip.

SLActive™ provides more predictability by achieving secondary stability sooner than SLA®.

Straumann® Bone Level Implant – Study Overview

To date, several studies have been initiated to substantiate the performance of the Straumann® Bone Level Implant.
