TOBACCO AND ORAL HEALTH

Break the Tobacco Habit and Save Your Oral Health

obacco use negatively affects oral health because it is one of the factors in the development and progression of periodontal diseases. According to studies, periodontal diseases are one of the leading causes of tooth loss in adults. Aim for a tobacco free lifestyle and improve your oral health as well as your overall health!

Tobacco use increases calculus, which is a hard substance that can only be removed from teeth during professional cleanings. Bacteria from calculus release toxins that infect the gums and causes red-

ness, inflammation and ultimately destruction. The destruction creates pockets causing the gums and bone to shrink and pull away from the teeth. If left untreated, the teeth may become loose and be lost. Detection of periodontal dis-

cult, but not impossible. That's beeases can be tricky in tocause smoking and tobacco reduces bacco users the delivery of oxygen and nutribecause ents to the gum and bone tissues, nicotine weakening the body's defense a n d mechanisms. This slows down the other healing process, which can cause periodontal treatment results to be less predictable.

Other oral conditions tobacco use causes include:

ease in tobacco users can be diffi-

- * Bad breath;
- * Oral and lip cancer;
- * Stained teeth;
- * Loss of taste and smell;
- * Mouth sores and spots; and,
- * Black hairy tongue.

All tobacco use is harmful! If you smoke cigarettes, cigars, pipes (including hoo-

> kah pipe) or chew smokeless tobacco, you are at risk for severe peri-

odontal diseases and/or other oral health conditions.

The good news is that quitting smoking today can improve the healing process and treatment outcomes.

chemicals in tobacco mask symptoms commonly associated with periodontal diseases. In addition, the treatment of periodontal dis-

Tips to Help You Quit Tobacco Use

Periodontal treatment can be more difficult in tobacco users, so your periodontist will urge you to quit tobacco use. The good news is that quitting may gradually erase the harmful effects of tobacco use on periodontal health.

Starting a smoking cessation program is a huge commitment and support might ease the process. To begin, ask your periodontist or physician, or contact your local hospital for more information on programs that best fit your needs.

Other tips recommended to help the tobacco-cessation program

include:

- ■Picking a stress-free time to
- ■Asking for support and encouragement from family, friends, and colleagues.
- ■Starting some form of exercise or activity each day to relieve stress and improve your health.
- ■Getting plenty of rest and eating a well-balanced diet.

- ■Joining a stop-smoking program, or other support group.
- ■Brushing your teeth often.
- ■Changing your daily routine and spending more time in places where smoking is prohibited.
- ■Keeping oral substitutes handy such as carrots, apples, and sugarless gum. 😵
